

Robust all-rounder for tough environments!

Robust. Stylish. Reliable.

The new TKV-084-FIT series comprises compact stainless steel keyboards that are available as a table (desktop) version or one for assembly in a frame. Their robust properties and high-quality workmanship make them suitable for use in demanding industrial environments. It is possible to use and integrate the keyboards in almost any working environment due to their compact dimensions and low overall height. The models are immune to any penetration of dust or water thanks to a silicone seal between the upper and lower parts of the keys. A special PORON® seal can be used as an alternative; this guarantees that everything works without any substances that interfere with paint adhesion.

- Compact dimensions, flat casing height
- Comfortable key feel with an operating force of approx. 1.5 N
- Available as a desktop enclosure, front insertion or rear insertion model
- Easy to introduce individual graphical elements like logos
- Suitable for industrial compartments and slide-in modules
- Specially ground or polished surfaces available on request
- Individual key cap shapes possible
- The standard models feature either a German or US layout; other layouts can be provided without much delay
